Evidence for
Excellence in
Education

The Education Endowment Foundation (EEF)

The Education Endowment Foundation (EEF) is an independent grant-making charity dedicated to breaking the link between family income and educational achievement, ensuring that children from all backgrounds can fulfil their potential and make the most of their talents.

The EEF aims to raise the attainment of children facing disadvantage by:

- Identifying promising educational innovations that address the needs of disadvantaged children in primary and secondary schools in England;
- Evaluating these innovations to extend and secure the evidence on what works and can be made to work at scale;
- Encouraging schools, government, charities, and others to apply evidence and adopt innovations found to be effective.

The EEF was established in 2011 by the Sutton Trust, as lead charity in partnership with Impetus Trust (now part of Impetus-The Private Equity Foundation) and received a founding £125m grant from the Department for Education.

Together, the EEF and Sutton Trust are the government-designated What Works Centre for improving education outcomes for school-aged children.

Executive summary

The project

Catch Up¹ Literacy is a structured one-to-one literacy intervention for pupils between the ages of 6 and 14 who are struggling to learn to read. It teaches pupils to blend phonemes (combine letter sounds into words), segment phonemes (separate words into letter sounds), and memorise particular words so they can be understood without needing to use phonics strategies to decode them. The intervention matches books to pupils according to their reading ability, which pupils then read to a teaching assistant (TA), so is intended to also support the development of their comprehension skills.

In this evaluation, the intervention was delivered through two 15-minute sessions per week over 30 weeks at the transition from primary to secondary school, with a break for the summer holidays. Pupils were identified by their Year 6 teachers in their feeder primary schools as being struggling readers who were predicted to achieve below level 4b in reading. Each secondary school employed two part-time TAs to deliver the intervention in the last few weeks of Year 6 and after the pupils transitioned to secondary school. The TAs delivering Catch Up Literacy were supplied with detailed session plans and received three half-day training sessions led by Catch Up.

The study was funded by the Education Endowment Foundation as one of 23 projects focused on literacy catch-up at the primary—secondary transition.

Key conclusions

1. The pupils that received Catch Up Literacy made more progress than pupils that did not. However, this difference was not statistically significant so we cannot be confident that it was not due to chance.
2. Catch Up Literacy did have a statistically significant impact on pupils' attitudes to school, self-assessed ability in reading, and their confidence in and enjoyment of writing.
3. Schools should ensure that Catch Up Literacy sessions are located in a private and quiet location, and that teaching assistants are given adequate time to prepare before each lesson.
4. Teaching assistants reported a number of benefits for their own professional development. These include increases in confidence, knowledge of literacy support and overall job satisfaction.
5. Future research could test the impact of Catch Up Literacy against an "active" control group that receives the same amount of one-to-one tuition as the pupils who receive Catch Up Literacy.

What impact did it have?

The pupils who took part in Catch Up Literacy made more progress than the pupils in the control group. This difference was not statistically significant, so we do not have sufficient evidence to confidently conclude that the effect did not occur by chance. The effects of the intervention on pupils of different genders and pupils who are eligible for free school meals (FSM) were similar to those in the main analysis, but also not statistically significant.

Positive and statistically significant outcomes were recorded on other measures. Pupils who received the Catch Up intervention appeared to develop more positive attitudes towards school, a higher self-reported score for reading confidence and ability, and a more positive rating for writing confidence and enjoyment. These outcomes had effect sizes of 0.25, 0.32 and 0.23 respectively. The process

¹ Catch Up[®] is a not-for-profit UK registered charity (1072425). Catch Up[®] is a registered trademark.

evaluation indicated that most TAs believed Catch Up Literacy had a number of benefits for their own professional development, and a positive impact on pupils' confidence and engagement with learning.

How secure is this finding?

The primary analysis is judged to be of moderate to high security and was awarded a security rating of 4 padlocks. The evaluation was set up as a randomised controlled trial. A maximum of 60 pupils from each of the 15 secondary schools were randomly assigned to one of three groups: a control group that received "business-as-usual" classroom teaching, an intervention group that received Catch Up Literacy, and a reserve group. Due to timing issues, pupils were selected prior to sitting their SATs. As Key Stage 2 results were used to control for prior attainment in the final analysis, the reserve group was used to replace pupils in the experimental groups if they did not complete Key Stage assessments. The developer led the training and oversaw the provision of the intervention, so it should be considered an efficacy trial.

Attrition was just above 5%, but this was evenly spread across the control and intervention groups, and there was no evidence that the attrition led to a biased trial. Pupils' literacy skills were estimated using the New Group Reading Test (Test 3a and 3b). Blind marking of test papers was undertaken, but both the attainment tests and the intervention were delivered by the same TAs and this should be considered as a threat to the validity of the measurements.

Pupils in the intervention group received one-to-one tuition as part of Catch Up Literacy, whereas the control group received normal classroom teaching. This introduces the possibility that a proportion of any observed effect was caused by the more intensive tuition received by the intervention group, not by any particular characteristics of the Catch Up Literacy intervention.

How much does it cost?

All of the direct costs to schools were borne by the EEF grant for the project. The evaluator used this information and the number of pupils receiving the intervention to estimate that Catch Up Literacy cost an average of £769 per pupil in this evaluation. This estimate includes the salary costs of TAs and the cost of the training provided by Catch Up. This cost will be lower if more pupils are involved in the intervention, as the cost of training a TA will be spread out over more pupils. The cost will also be lower if schools do not implement Catch Up Literacy as an additional activity that requires paying TAs for more time, but use it to replace things they were already doing, as this will eliminate the salary cost from the cost estimate above. The training provided by Catch Up costs £350 per attendee. The independent evaluator did not look at additional costs that were associated with attendance at this training or additional resources that may have been required to deliver the intervention successfully.

Group	No. of pupils	Effect size (95% confidence interval)	Estimated months' progress	Evidence strength*	Cost**
Intervention vs control (all pupils)	557 pupils (15 schools)	0.12 (-0.02 – 0.25)	+2 months	🔒🔒🔒🔒	££££
Intervention vs control (FSM)	115 pupils (15 schools)	0.004 (-0.30 – 0.30)	0 months		££££
*For more information about evidence ratings, see Appendix C in the main evaluation report. Evidence ratings are not provided for sub-group analyses, which will always be less secure than overall findings.					
**For more information about cost ratings, see Appendix D in the main evaluation report.					

Introduction

Intervention

Catch Up® Literacy is a structured one-to-one literacy intervention for learners from the age of 6 to 14 years who are struggling to learn to read. The intervention adopts a combination of segmenting and blending phonemes, and memorising letter names of high-frequency sight words. It is targeted to the needs of individual learners, identified through a bank of assessments for learning, and involves two individual 15-minute sessions per week. A member of staff within each school manages Catch Up Literacy while the intervention is usually delivered by trained teaching assistants. Catch Up provides a four-part training programme for managers and classroom assistants, alongside ongoing support from the Catch Up trainer. It is intended that managers attend all four parts of the training, while classroom assistants attend two. The training programme includes:

- L1 'Introducing Catch Up Literacy', a 90-minute session for senior managers and the member of staff managing Catch Up.
- L2 'Delivering Catch Up Literacy', three half-day sessions for staff who will deliver the intervention and the member of staff who will manage it.
- L3 'Managing Catch Up Literacy', a 60-minute session for the member of staff who will be managing the intervention.
- L4 'Review and next steps', a half-day session for those who are delivering the intervention and the member of staff managing it.

There are four stages of Catch Up Literacy: assessments for learning, which are used to set targets and identify the appropriate starting points for pupils; selecting an appropriate book for the learner to read; delivery of two individual (one-to-one) sessions per week, each lasting 15 minutes; and ongoing monitoring, through which assessments for learning are revisited and targets are reviewed. In this evaluation, the Catch Up Literacy intervention lasted 30 weeks and sessions followed the following schedule:

- three minutes of prepared reading
- six minutes of the pupil reading out loud
- the pupil and TA then discuss the text
- six minutes of linked writing.

Catch Up Literacy was launched in 1998, based on original research by Diana Bentley, Suzi Clipson-Boyles and Dee Reid. It was designed for seven- to eight-year-old (Year 3) pupils who only achieved level 1 for reading in the Key Stage 1 Standard Assessment Tests, but has since been developed for use in secondary schools (Catch Up, 2008). It is now appropriate for learners from 6 to 14 years of age who struggle with reading.

Background evidence

The approach has been informed by a range of research evidence relating to literacy. This includes evidence related to supporting struggling readers (Bentley and Reid, 1995), the influence of children's attitudes to reading on their progress in learning to read (Wray and Medwell, 1991), matching struggling readers to books that are sufficiently challenging but not frustrating (Kress and Johnson, 1965), the importance of fluency and reading for meaning (Stanovich, 1980), the reciprocal gains of reading and spelling (Clay, 1991), and taking a known sight word as a starting point for analogies in reading development (Goswami, 1994).

The Catch Up Literacy intervention was designed with these findings in mind. For example, stage 1 of the intervention (the assessment) includes a reading interview which assesses pupils' attitudes

towards, perceptions of, and experiences of reading. During the sessions, the prepared reading element is designed so that the pupil is able to concentrate on reading for meaning, while the linked writing element, which follows the reading elements, allows the pupil to benefit from the reciprocal gains of reading and spelling.

Since its development there have been a number of studies reporting on the benefits of Catch Up Literacy. For example, a study looking at Catch Up Literacy in 28 secondary schools in England and Wales (427 pupils in Years 7 to 10) reported that, after an average of 8.3 months on Catch Up, pupils' reading age increase by an average of 16.71 months (Catch Up, 2008). However most of these studies did not include a control group and so their results should be treated with caution.

In 2012, Holmes *et al.* undertook a small-scale trial of Catch Up Literacy with 87 pupils in Years 7 and 8 in one local authority in England. A treatment group of 20 pupils were given Catch Up Literacy support while a control group of 67 pupils were given matched-time support (in which they received additional literacy support for the equivalent time as the Catch Up group but not Catch Up Literacy). Pupils were randomly assigned to either of the two groups. Pupils' reading level was measured before starting the trial, which showed there were no significant differences between the two groups, and again after the intervention was completed. The results showed that learners receiving Catch Up support made a mean gain of 13.10 months in terms of chronological reading age (ratio gain² of 3.27), compared to 5.57 months in the time-equivalent group (ratio gain of 1.39). The effect size (based on the difference in the ratio gains of the two groups divided by the pooled standard deviation) was seen to be large ($d=0.86$). However, these results are based on very small numbers and were not statistically significant.

Overall, the intervention is based on an evidence-based approach to literacy and a small-scale trial has shown promising results. Therefore, the research behind the principles used by Catch Up Literacy is fairly strong, but there is not yet compelling RCT-based research evidence that the programme itself has had a significant effect on raising literacy levels.

Evaluation objectives

The primary research question was to identify the impact of the Catch Up Literacy intervention on the reading ability of individual pupils over a 30-week intervention period. The intervention period included the summer holiday. Pupils selected for the intervention started receiving the intervention at the end of Year 6 and started again when they joined Year 7. Pupils' literacy skills were measured by performance on the New Group Reading Test.

The process evaluation explored the implementation and scalability of the intervention.

Project team

The intervention delivery evaluation team was led by Dr Ann Dowker of the University of Oxford and Dr Graham Sigley from Catch Up. This team was responsible for the recruitment of schools and TAs, the training of TAs to use the Catch Up intervention, liaising with schools to organise, providing test administration guidance, and undertaking follow-up sessions with TAs at the end of the intervention.

The external evaluation team at NFER was led by Simon Rutt, Head of Statistics. While the overall project and impact evaluation were led by Simon Rutt, the process evaluation was led by a number of researchers over the lifetime of the project starting with Claire Easton and Claire O'Beirne and ending with Kelly Kettlewell and Gill Featherstone. They were all either Researchers or Senior Research Managers within the Research Department. Within the impact evaluation the NFER team was

² Ratio gain is the gain in reading age made during a chronological time span, expressed as a ratio of that time span. A ratio gain of one would mean that the pupil's skills are developing at normal pace.

responsible for the randomisation of pupils, the analysis of test data and the writing of a final evaluation report. NFER was responsible for the whole of the process evaluation and its contribution to the final report.

Ethical review

The NFER has a well-developed Code of Practice that contains detailed ethical protocols. These protocols govern all research undertaken by NFER and this trial lies within them. Parents gave active written consent for all eligible pupils put forward for the intervention and testing, and the Catch Up team confirmed that consent had been received before continuation within the trial.

Methodology

Design

This was a multicentre, two-arm, parallel-group, pupil-randomised trial within schools in England. The trial was designed to involve 17 secondary schools with two part-time teaching assistants (TAs) being identified from within each secondary school. The EEF grant covered salaries and other costs to schools. These TAs worked with all feeder primary schools that contained treatment pupils. As the Catch Up intervention is delivered on a one-to-one basis there was a very small risk of cross-contamination between treatment and control groups, meaning that pupil randomisation is the preferred design as it is more efficient than a clustered design.

Apart from the number of secondary schools recruited to the project, which was reduced from 17 to 15, the design of the trial remained consistent with the design outlined in the published protocol.³

Eligibility

Pupils were selected as eligible by their feeder primary schools if their predicted level in the Key Stage 2 Reading assessment was below a level 4b. Lists of pupils were provided to NFER for the purpose of randomisation and the evaluator was not aware of the methods used by schools to select pupils for these lists. NFER does not believe this was carried out in a way that would introduce bias into the selection of pupils. Lists of pupils provided to NFER were first checked for correct eligibility criteria, i.e. if any pupils had a predicted level above 4c they were removed from the list. Parental consent had to be obtained by the school and confirmation that this had been received was indicated on the file provided to NFER. NFER was not responsible for obtaining this consent but has no reason to believe that this was not undertaken in an acceptable manner and was received for all pupils prior to randomisation. A copy of the consent letter is contained in Appendix D to this report; while NFER has no direct evidence that these were received for all pupils, schools were instructed to only provide pupil details if this consent had been received.

Eligibility was also dependent on the pupil having obtained a place at the relevant secondary school. This would have been known at the time of selection although a pupil may still not actually transfer to that secondary school. Indeed, 25 pupils were excluded from the analysis as they did not transfer to relevant secondary schools or left their school before the end of the 30-week period. These pupils are highlighted later in the report.

Intervention

Catch Up Literacy is a structured one-to-one literacy intervention for learners aged 6 to 14 who are struggling to learn to read. The intervention adopts a combination of segmenting and blending phonemes, and memorising letter names of high-frequency sight words. It is targeted to the needs of individual learners, identified through a bank of assessments for learning, and involves two individual 15-minute sessions per week. How the sessions were run in practice is discussed at greater length in the process evaluation section of this report. Pupils were identified while in primary school and feeder secondary schools employed two part-time teaching assistants (TAs) to deliver the intervention. Two assistants were recruited from within each secondary school to ensure the project was able to deliver the correct number of sessions to those pupils selected to be part of the intervention. Teaching assistants organised the delivery of the sessions directly with the primary schools, ensuring any burden on the schools was kept to a minimum.

³ The Catch Up Literacy evaluation protocol is located here:
http://educationendowmentfoundation.org.uk/uploads/pdf/Transitions-_Catch_Up.pdf

A number of sessions were held within the primary schools and pupils were re-identified when they transferred to their feeder secondary school. Due to slightly different start times, TAs worked within primary schools for between four and five weeks. A number of pupils did not transfer as expected and they are identified in the flow diagram.

The intervention itself is made up of four main stages.

Stage 1 – Assessments for learning

- A bank of assessments that can be used to determine what the learner can do and where their needs lie.
- These assessments are used to set literacy targets and the appropriate starting point.

Stage 2 – Selecting an appropriate book

- Catch Up has an online list of more than 8,000 books that have been categorised into 12 gradually increasing levels of difficulty.
- Books are selected with the aim of enabling a struggling individual to read with a high degree of confidence and success.

Stage 3 – Individual 15 minute sessions

Individual session part 1: Prepared reading (3 minutes)

This part of the session aims to:

- give the learner an overview of the story, so that they can concentrate on reading for meaning
- introduce unfamiliar vocabulary
- give the learner more confidence to tackle the text.

Individual session part 2: The learner reads and text is discussed (6 minutes)

This part of the session aims to:

- give an opportunity to identify which reading strategies the learner uses
- encourage the learner to take responsibility for tackling any less familiar words
- provide an opportunity to discuss the text and to ensure that the learner understands the content and can infer meaning and express opinions.

Individual session part 3: Linked writing (6 minutes)

This part of the session aims to:

- provide focused support based on observed miscues
- enable the learner to benefit from the reciprocal gains of reading and spelling.

Stage 4 – Ongoing monitoring

- A record of each session provides information about the learner's needs and progress.

Outcomes

The primary outcome was reading ability, and was estimated using the New Group Reading Test⁴ (NGRT). This assessment was chosen by the EEF, in consultation with NFER, as it is a reliable and accepted assessment of literacy and was the test used across all 23 trials in the EEF's literacy catch-up funding round. Secondary outcome data was collected by NFER through a pupil questionnaire administered during the same session as the final NGRT assessment (see appendix A for the questionnaire). The questionnaire was designed by NFER researchers using items that had shown reliability in previous studies. NFER collated all responses and created five composites that identified pupils' perception in the following areas:⁵

Attitude to school

1. It is important to do well at school
2. I try hard at school
3. Most of the time I feel confident about doing my work in lessons
4. Most of the time I enjoy school
5. I behave well in lessons
6. I always do my homework

Self-esteem

1. I feel happy
2. I am a confident person
3. I have people to talk to if I feel unhappy or worried
4. I like the way I am
5. I feel positive most of the time

Like reading

1. I enjoy reading
2. I enjoy reading in my own time
3. Reading is one of my favourite things to do
4. I enjoy talking to my friends/family about the books I have read

Good at reading

1. I feel confident reading out loud to the class
2. I know how to deal with words I find hard to read
3. I am doing well in reading

Good at writing

1. I enjoy writing
2. I find writing easy
3. I feel confident about writing in sentences
4. Writing is one of my favourite things to do
5. I am doing well in writing

⁴ The *New Group Reading Test (NGRT)* is used in groups to assess and monitor reading and comprehension. More information can be found at <http://www.gi-education.com/international-products/new-group-reading-test-ngrt>

⁵ Reliability analysis was carried out on all composites and the following Cronbach alpha's were achieved: attitude to school 0.8, self-esteem 0.8, like reading 0.9, good at reading 0.6, and good at writing 0.8.

These secondary outcomes were deemed appropriate by EEF as Catch Up Literacy could produce desirable outcomes in addition to the reading ability measured by the NGRT.

Tests and questionnaires were administered by the teaching assistants and all schools were provided with the teacher guidance supplied by the NGRTs and additional guidelines from Catch Up that were relevant to this trial. These guidelines were seen by the external evaluator prior to them being sent to the schools and covered the administration of the tests, their timings, whether breaks were allowed, how they should be managed, testing of absent pupils, and how to return completed papers.

All test papers were sent to Catch Up and then to Dr Dowker who marked all papers and generated raw and standardised scores. Dr Dowker did not know the membership of each group until she had finished marking the post-test data, as group membership was added by the Catch Up team after marking. All data was sent to NFER via a secure data transfer portal.

The independent evaluator checked the guidelines for test administration, but otherwise the process of test administration and test marking was not evaluated by the evaluator. There is no evidence to suggest that testing was not conducted according to appropriate protocols.

Sample size

The sample size was determined by the intervention provider prior to the appointment of NFER to the role of external evaluator. The original design was for 17 schools to provide 408 pupils in both treatment and control groups, 48 pupils per school. Based on the assumptions of a minimal intra class correlation of 0.05, the original design has a Minimum Detectable Effect Size (MDES) of 0.18.

The final design was with 15 schools containing 286 pupils in the treatment group and 271 in the control group. Power calculations on the basis of the final sample were carried out. In calculating the power of the design, the actual intra-class correlation (ρ) was 0.06. Given the sample size and assumptions on ρ , this design has a power of <0.80 and is therefore underpowered to detect an effect size of 0.12. The MDES for this design is 0.27.

Randomisation

An Excel-based randomisation algorithm was used by NFER to allocate eligible pupils to one of three groups. These were the treatment and control groups and a reserve group if a secondary school was able to provide more than the 48 pupils requested. Given the number of pupils who needed to receive the treatment it was decided by Catch Up that 48 pupils was the maximum that one secondary school could provide for the trial. At the start of the intervention pupils were registered in a number of different feeder primary schools. These pupils would be randomly allocated to one of the two groups. This would maintain a balanced design with a maximum of 24 pupils from one school in each group.

The pre-test measure was to be the pupils' end of Key Stage 2 National Curriculum reading results; since the randomisation procedure took place before the pupils sat their end of KS2 tests, there was potential for this group to be reduced in size due to absence from the KS2 testing process. To maximise the number of pupils, it was decided to ask secondary schools to provide up to 60 eligible pupils with 48 being randomised to treatment or control and up to 12 being randomly allocated to a reserve group. If a pupil who had been selected for the treatment or control group was then absent on the day of their KS2 assessment they would be replaced with a pupil from the reserve list. Of the 21 pupils who had been allocated to the reserve group, only three of these pupils entered the project before the trial commenced. Instructions were sent by Catch Up to primary schools on how their pupils were selected, and into which group they had been selected, but there was not a random selection from within the reserve group if it was necessary to replace a pupil who had not sat their KS2 assessment.

Very few schools were able to provide more than 48 eligible pupils, and where a school provided fewer than 48 pupils, all pupils were allocated to the treatment or control groups. While every attempt was made to maintain a balanced design with the same number of pupils in treatment and control, in some schools this was not possible as consideration had to be given to the contracts given to the TAs. Where schools provided less than 48 eligible pupils, the randomisation process allocated a number to be randomised to the intervention group with the remainder to the control group. For example, a school that provided 33 pupils may have had 19 randomised to the treatment group and 14 to the control group. Pupil lists were provided to NFER by Catch Up and following randomisation lists were returned to Catch Up so that they were able to inform the TAs of the location of all treatment pupils. This was necessary to minimise the travelling time between primary schools and to maximise the amount of time primary schools had to organise their class teachers. Following KS2 assessments, TAs were informed of the pupil names so that they could develop more detailed plans with primary schools.

Analysis

The primary aim of the analysis is to assess whether the Catch Up Literacy intervention had a significant impact on pupils' literacy, as measured by the post-intervention test scores and controlling for prior attainment in the form of Key Stage 2 reading test scores. This is performed on an intention-to-treat basis. That is, the original random assignment to treatment and control groups is reflected in the analysis, regardless of whether the pupil actually received the intended intervention.

The primary analysis examined the results of the post-intervention test, controlling for prior attainment and treatment assignment. Additionally, the analysis controlled for age, gender, and free school meal (FSM) eligibility, together with interaction terms for gender with treatment, and for FSM eligibility with treatment, to assess the extent to which the intervention has had a differential impact across subgroups. This analysis was performed using a simple linear regression model, with school fixed effects controlled for by including individual school dummy variables as covariates.⁶ While the protocol

⁶ Considering the small number of schools involved, and the fact that pupils were randomised within schools, controlling for school effects with the use of school dummies is preferable to using multilevel models in this context.

identified multi-level modelling would be used for analysis, the above analysis of dummy variables to identify schools was used while the analytical program STATA adjusted the standard errors to take account of the clustered nature of the data. As required by EEF policy, the same analysis was also performed separately for the group of FSM pupils.

The secondary analysis looked at the outcomes from the pupils' questionnaire (see Appendix A). The items in sections 2 and 3 were specifically designed to derive composite measures on, respectively, general attitudes towards school and levels of confidence/self-esteem of the pupils. Additionally, we performed factor analysis on the items in question 1 to identify one or more composite measures regarding specific attitudes towards reading and writing. The structure of the analysis of composite outcomes was similar to that of the primary analysis, with a simple specification including prior attainment and treatment assignment, and a further specification including age, gender, and FSM eligibility as additional covariates, together with interaction terms for gender with treatment, and for FSM eligibility with treatment. As with the primary analysis, the analysis was performed using a simple linear regression model, with school fixed effects controlled for by including individual school dummy variables as covariates.

Effect sizes are calculated using Hedges' g formula as described in the EEF analysis guidelines. All the preparatory data processing is performed in IBM SPSS 21, while the analysis is performed using STATA 13.

Process evaluation methodology

The process evaluation comprised three different components: observations of training sessions; qualitative interviews with coordinators and TAs; and surveys of TAs at two time points. The first component consisted of the team attending and observing Catch Up Literacy training sessions. The team attended 'Delivering Catch Up Literacy' (L2) and 'Managing Catch Up Literacy' (L3) training sessions prior to the intervention commencing in May 2013. The team then observed two follow-up 'Review and next steps' (L4) sessions during February and April 2014.

For the second component, the team undertook telephone interviews with 13 TAs, 7 Catch Up Literacy coordinators, and 2 TAs who were both coordinating and delivering Catch Up Literacy ($N=22$ participants, across 13 participating schools). Each school has a Catch Up Literacy coordinator who oversees the intervention within the school and offers support to the TAs. Researchers chose this data collection method in order to gain in-depth qualitative data from a wide range of interviewees during a short timescale while ensuring disruption to the participating schools, TAs, and coordinators was kept to a minimum. Interviews took place between June and July 2014.

The team invited all TAs and coordinators to participate in a semi-structured interview with the aim of achieving up to 25 participants in total. However, the timing of the interviews meant that recruiting TAs and coordinators was challenging. Furthermore, their availability was limited due to end of school-year activities.

Three experienced NFER researchers carried out all interviews via telephone. Interviews took between 15 to 35 minutes, with most taking around 20 minutes. As per NFER's Code of Practice, at the start of every interview the researchers explained the purpose of the interview, and the data protection and confidentiality protocols. Interviews were recorded only when interviewee permission was granted.

For the final component of the process evaluation, Catch Up teaching assistants were sent paper-based surveys at two time-points (midway through the intervention (Appendix B) and at the end of the intervention (Appendix C)). At both time points the surveys were sent to all 28 TAs delivering Catch Up. The aims of the survey were to assess how the training prepared the TAs to deliver the intervention and to ascertain how the intervention had actually been delivered and whether the fidelity

of the trial had been maintained. In total we received 22 completed surveys at the mid-point of the intervention and 27 completed surveys at the end of the intervention. These are response rates of 62% and 96%. The response rate was lower than hoped for in the first survey, but was very high in the second survey.

Impact evaluation

Timeline

Activity	Date
Schools recruited	January–March 2013
Schools provide list of eligible pupils to NFER	By end of March 2013
Schools informed of randomised groups	April 2013
Pupils sat KS2 assessments	May 2013
Trial commences	June 2013
Pupils transfer to secondary school and sit NGRT test	September 2013
Pupils complete trial	March 2014
Pupils sit NGRT post test	March–April 2014
Data provided to NFER for analysis	July 2014

Schools

The external evaluator was only appointed after this recruitment had taken place so had no input into the process. There is no reason to believe that it was not undertaken in an appropriate manner. The following is the process adopted by Catch Up in obtaining secondary schools for the project. NFER are unaware of the total number of schools approached. Catch Up adopted the following protocols when recruiting schools.

- Any secondary school that contacted Catch Up between January and June 2013 enquiring about either of the Catch Up interventions was offered the opportunity to be part of the project if they could get their feeder primary schools involved.
- Catch Up approached its local authority contacts and asked if they had schools in their local authority area that were in challenging contexts and could benefit from intervention support.
- Catch Up directly approached some schools.

There were 15 secondary schools involved in the trial, 7 maintained schools and 8 academies.⁷ The majority of schools were located in urban areas, with 4 located in smaller towns and 1 in a rural area. The three main regions of England were all represented, with 9 schools in the South (including 1 in London), 2 schools from the Midlands, and 4 from the North.

As shown in the tables below, the majority of schools were rated *Good* or *Outstanding* by Ofsted, and they were reasonably well distributed across quintiles of FSM rates.

⁷ As of start of academic year 2013/14.

Table 1: Number and percentage of participating schools by Ofsted rating

	Frequency	Percent
Outstanding	3	20.0%
Good	8	53.3%
Requires Improvement	1	6.7%
Inadequate	3	20.0%
TOTAL	15	

Table 2: Number and percentage of participating schools by FSM quintiles

	Frequency	Percent
Lowest 20%	3	20.0%
2 nd lowest 20%	4	26.7%
Middle 20%	3	20.0%
2 nd highest 20%	3	20.0%
Highest 20%	2	13.3%
TOTAL	15	

Pupils

As shown by the flow diagram below, 631 pupils were randomised into three groups: the Catch Up (treatment) group (315 pupils), the control group (295 pupils) and the reserve group (21 pupils). Of the 21 reserves, 3 were eventually included in the treatment group.

The final analysis comprises 286 pupils for the treatment group and 271 pupils for the control group. Of the 32 excluded from the treatment group, 5 were missing end of Key Stage 2 test results and 27 had no post-intervention test. The reasons for missing the post-intervention test are as follows: 17 pupils did not transfer to, or eventually left, the participant school; 6 were withdrawn from the trial; 1 pupil was absent; and 3 had other reasons. Of the 24 pupils excluded from the control group, 8 were missing Key Stage 2 results and 16 had no post-intervention test. The reasons for missing the post-intervention test are as follows: 8 pupils did not transfer to, or eventually left, the participant school; 2 pupils were absent; 1 was withdrawn from the trial; and 5 had other reasons. Finally, 18 of the original 21 pupils in the reserve group were never included in the trial. These pupils commenced the trial at the beginning with all other pupils.

An analysis of the characteristics of the 56 pupils excluded from the analysis shows that there is no significant difference in the gender composition compared to the group of pupils included in the analysis, whereas the percentage of pupils eligible for free school meals is significantly higher (40%, compared to 21% for the pupils in the analysis). The difference in KS2 reading points scores between the two groups is also not statistically significant, with an effect size of 0.09 (C.I. -0.21 – 0.40).

Pupil characteristics

Tables 3, 4, and 5 compare pupil characteristics for the treatment and control groups, and show they are broadly similar in terms of gender composition, percentage of pupils eligible for FSM, and prior attainment. Statistical tests⁸ show no significant differences between the two groups, at the standard 95% level of confidence, for the characteristics in question. The baseline effect size for Key Stage 2 reading score is not statistically different from zero, with 0.11 (C.I. -0.06; 0.27) standard deviations in favour of the control group. The baseline effect size for the NGRT test score taken at the start of Year 7 is also not statistically different from zero, with 0.02 (C.I. -0.19; 0.14) standard deviations in favour of the treatment group.

Table 3: Gender by randomised group

	% Male	% Female	N
Original Randomisation			
Control	59.3%	40.7%	295
Treatment	61.3%	38.7%	318
All pupils	60.4%	39.6%	613

Control	24.8	NA	287
Treatment	24.2	NA	313
All pupils	24.5	NA	600
Main Analysis			
Control	24.7	89.3	271
Treatment	24.2	89.6	286
All pupils	24.4	89.5	557

Outcomes and analysis

Primary analysis

The primary aim of the analysis is to assess whether the intervention has had any significant impact on pupils' literacy, as measured by the post-intervention test scores, controlling for prior attainment in the form of Key Stage 2 reading scores. Tables 6 and 7 show the results of the main analysis, conducted on an intention-to-treat basis.

Table 6: Intention-to-treat analysis outcomes (basic specification)

	Model coefficient	Standard error	95% CI	p
Catch Up Treatment	1.24	0.72	-0.17–2.65	0.09
Intercept	56.34	2.96	50.53–62.15	0.00
KS2 Reading Score	1.28	0.08	1.13–1.43	0.00

Table 6 shows the results of the basic specification, with prior attainment and the intention to treat (ITT) indicator as the main explanatory variables, together with school-level dummies to control for clustering of pupil results. Estimates for the main covariates are reported in the table.⁹

The results show that the post-test score for pupils in the treatment group is, on average, 1.24 points higher than the score of pupils in the control group. However, this difference is not statistically significant at the 95% confidence level. The estimated **effect size** is **0.12 (C.I. -0.02 – 0.25)**.

The results of the analysis including additional pupil characteristics are reported in Table 7. The additional explanatory variables are gender, age (in months), and FSM eligibility, together with interaction terms for gender and treatment, and for FSM eligibility and treatment. These results, while broadly confirming those of Table 6, do not identify any significant interaction. The effect size for this analysis is **0.16 (C.I. -0.02 – 0.34)**.

As required by all EEF evaluations, we performed a separate analysis for FSM pupils, with the same specification as above. This subgroup analysis does not identify any significant effect for the explanatory variables included, except for the prior attainment measure. The estimated effect of the treatment among FSM pupils is negligible, with an **effect size** of **0.00 (C.I. -0.30 – 0.30)**. The cohort sizes for this analysis were 62 FSM pupils in the control group and 53 pupils in the treatment group.

⁹ The sign and size of the individual school-level dummies vary across schools, but the estimates are never significant at the 95% confidence level.

Table 7: Intention to treat analysis outcomes (subgroup specification)

	Model coefficient	Standard error	95% CI	p
Catch Up Treatment	1.71	0.99	-0.23–3.66	0.08
Intercept	111.38	15.71	80.52–142.24	0.00
KS2 Reading Score	1.30	0.08	1.15–1.45	0.00
Gender (Female = 1, Male = 0)	0.68	1.04	-1.37–2.72	0.52
Age (in months)	-0.39	0.11	-0.60 - -0.18	0.00
FSM (eligible = 1, Not eligible = 0)	0.76	1.29	-1.77–3.29	0.56
Female in treatment group	-0.64	1.46	-3.50–2.22	0.66
FSM in treatment group	-1.38	1.77	-4.85–2.09	0.44

An on-treatment analysis was undertaken using sessions data provided by Catch Up. Data was available for the majority of pupils with a mean number of sessions being 32, ranging between 6 and 52. Sessions data was introduced into the models instead of the dichotomous variable that indicated pupil membership of either treatment or control groups. Pupils in the control group were given a dosage of zero. No significant effect was found when using this session's data. At the request of Catch Up a dichotomous variable was also introduced which identified whether a pupil received less than 30 sessions or more than 30 sessions. This variable also was non-significant.

Some additional analysis was requested by Catch Up and was therefore undertaken outside the original protocol. Analysis was undertaken to assess the effect of prior experience of the school with the Catch Up programme on the post-intervention test scores. While the results show a positive effect size of 0.48 (C.I. -0.02 – 0.98), this is not statistically significant, due to the high variability of results. Adding an interaction term indicating pupils in the treatment group within these schools yields a negligible effect.

Analysis also looked at the differential effect for pupils above and below level 4B at Key Stage 2. Adding a further interaction term to the model reported in Table 7 shows that pupils with level 4B or above are substantially more likely to have benefited from the intervention, with an effect size of the interaction term of 0.4 (C.I. 0.19 – 0.61). Performing the analysis separately for pupils with level 4C or below, using the primary analysis model specifications, we find an effect size of 0.13 (C.I. -0.05 – 0.32), similar to that of the main analysis but not statistically significant, due to the high variability of results. None of the interaction terms are found to be significant.

Secondary analysis

The composite measures described in the methodology section are used as outcome variables for the analysis presented below. Unfortunately, we were not able to match questionnaire data with results data for 56 of the 557 pupils included in the primary analysis. However, this does not appear to generate a systematic bias in the analysis.¹⁰

Table 8 below shows the estimated effect size of the Catch Up intervention on the five composite measures, together with its 95% confidence interval and p-value.

The results show a statistically significant effect on a number of these outcomes with the largest effect being on reading confidence and ability, with an effect size of **0.32 (C.I. 0.15 – 0.50)**. Also significant were the effects on writing confidence and enjoyment, and general attitude towards school.

¹⁰ There is no systematic difference in gender composition, FSM rates, or in prior attainment, as measured either by KS2 results or by pre-intervention test results.

Interaction terms were only significant for the measure identifying attitude towards school, with females and FSM pupils showing a smaller, although still positive, effect of the intervention. The intervention effect was 0.51 while the FSM/Intervention interaction had a negative effect of -0.45.

Table 8: Secondary analysis: effect of intervention on questionnaire composites

Composite	Effect size	95% CI	p
Positive attitude towards school	0.25	0.08–0.42	0.00
Confidence and self esteem	0.14	-0.03–0.32	0.10
Reading enjoyment	0.14	-0.03–0.31	0.11
Reading confidence and ability	0.32	0.15–0.50	0.00
Writing confidence and enjoyment	0.23	0.06–0.40	0.01

Cost

All of the direct costs to schools were borne by the EEF grant for the project. The evaluator used this information and the number of pupils receiving the intervention to estimate that Catch Up Literacy cost an average of £769 per pupil in this evaluation. This estimate includes the salary costs of TAs and the cost of the training provided by Catch Up. This cost will be lower if more pupils are involved in the intervention, as the cost of training a TA will be spread out over more pupils. The cost will also be lower if schools do not implement Catch Up Literacy as an additional activity that requires paying TAs for more time, but use it to replace things they were already doing, as this will eliminate the salary cost from the cost estimate above. The training provided by Catch Up costs £350 per attendee. The independent evaluator did not look at additional costs that were associated with attendance at this training or additional resources that may have been required to deliver the intervention successfully.

In 2010, the Catch Up Literacy developers commissioned New Philanthropy Capital (NPC) to undertake a cost evaluation, which estimated that the cost per struggling learner is £120. This was later updated to £130 to account for inflation. Further details can be found at <http://www.catchup.org/Training/CatchUpLiteracytraining.aspx>.

Process evaluation

Implementation

All TAs interviewed had attended the three half-day L2 training sessions which focused on delivering Catch Up Literacy. However, two of the coordinators had not attended the training; one did not attend because they had received the training previously before they had started to work at the school, while another was told by their school that they were not allowed to attend. Nearly all interviewees found the L2 training very useful, thorough, and delivered at an appropriate pace. Three TAs, who were already delivering Catch Up, felt that the training sessions helped to refine what they were already delivering. Most coordinators believed that it was cost effective for the coordinators to attend the L2 training sessions as it was important for them to be able to understand the delivery in order to support and oversee the work of the TAs.

Nearly all of the coordinators attended the L4 training session at the end of the intervention, while all TAs had attended this session. This was also seen as a positive training session as it helped the TAs to share knowledge and offered reassurance of their delivery. Two coordinators and one TA felt that this session was helpful but not essential for delivery.

When asked if they had spent additional time familiarising themselves with the materials prior to delivery, most of the TAs said yes. This varied from spending very little time re-reading sections of the booklet to spending several hours in their own time familiarising themselves with the materials, getting used to the different levels, and learning how to set targets. Coordinators generally had not spent additional time familiarising themselves with the materials.

Both the TAs and coordinators valued the support that Catch Up had provided to them, in addition to the training sessions. All TAs felt the trainers were very supportive and approachable outside of the sessions and many of the TAs explained that they often contacted their trainer with questions as they started with delivery. The trainers' visits to the schools were seen as particularly valuable.

Generally TAs delivered up to three Catch Up sessions per hour to pupils. However, they believed that delivering two Catch Up sessions per hour was more realistic. This was because TAs needed to prepare prior to the session and complete paperwork after the session. In some instances, the TAs also needed the flexibility to be able to go and collect pupils who had forgotten to attend the session. A small number of TAs explained that they had planned to deliver either four or three sessions in an hour, which was later changed due to the timing being too tight. In line with this, when asked about time spent preparing for sessions, 17 of the 27 TAs (52%) who completed the end of intervention survey stated that they spent at least 10 minutes preparing for each of the sessions.

Overall, TAs felt well equipped to deliver Catch Up Literacy, and this seemed to increase with time. At the mid-point of the intervention, 16 of the 22 TAs (73%) said that they felt equipped to deliver Catch Up Literacy either to a great extent or entirely, while 6 said to some extent, and none said not at all. By the end of the intervention all of the 27 TAs who responded to the questionnaire said that they felt equipped to deliver Catch Up Literacy either to a great extent or entirely. It should be noted that two TAs and six schools had previous knowledge of Catch Up.

Both TAs and Catch Up coordinators who were interviewed identified a number of barriers to delivering Catch Up Literacy. The most common barrier was a lack of time, specifically relating to TAs not having sufficient time to prepare and deliver the intervention, and timetabling restrictions. Some interviewees also said that sometimes pupils did not turn up for sessions, which made it more difficult to fit in all sessions as these then needed to be rescheduled.

TAs also highlighted the difficulty in finding a suitable location within the school to deliver the intervention which was sufficiently private so that pupils did not get distracted or feel embarrassed by

being seen getting extra support, particularly where they were expected to read out loud. Two coordinators said that, due to previous experience of running literacy interventions (including Catch Up), they felt it was very important to have a designated private room for the intervention, and as such had ensured their TAs had this resource.

Two TAs and two coordinators said that they had come across some resistance from staff members who did not want the pupils to be taken out of their lessons. This made timetabling more difficult. One TA, who was also a coordinator, said that they did not have the buy-in from the senior management team, as they preferred interventions that could be run as a group rather than a one-to-one intervention.

Other barriers mentioned by a minority of interviewees included:

- primary schools not wanting to engage with the intervention
- issues relating to the funding of the intervention such as not receiving enough funding for the number of staff involved or not receiving the funding before starting delivery
- keeping the intervention as a transition project after the end of the trial, due to funding and logistical constraints (for example a lack of funding for TA travel expenses).

Fidelity

Most of the schools delivered Catch Up Literacy sessions in timetabled slots whereby pupils were taken out of the same lesson each week (or every other week if the school operated a two-week timetable). A small number of schools tried to avoid pupils missing the same lessons by changing the times of the Catch Up sessions each week. In three cases, the schools tried to avoid pupils missing any lessons by running Catch Up sessions before school or in additional literacy time or tutor time.

When planning delivery, most schools tried to avoid timetabling sessions to coincide with certain lessons, including core lessons such as mathematics, English or science, or, for practical reasons, physical education and drama. In the majority of schools interviewed, the school did not want the pupils to miss core curriculum; however, in a small number of cases the school took into account the subjects pupils enjoyed as they were concerned that the pupils would be less likely to engage with the Catch Up sessions if it meant they would miss their favourite lessons.

The majority of TAs interviewed said that they were able to deliver two Catch Up sessions per week. In one case the school had a two-week timetable and this caused timetabling issues which resulted in some of the pupils having three sessions in the first week and one session in the second week. Most of the TAs did say that some pupils had missed a few sessions because of staff or pupil absence, pupils forgetting to turn up to sessions, or scheduled trips or events. However, this was seen to be something that happened infrequently.

The results of the two TA questionnaires showed that TAs were not consistently delivering two sessions per week for each pupil at the mid-point, but this had changed to almost all delivering two sessions per week by the end of the intervention. At the mid-point, 15 of the 22 respondents were delivering two sessions per week (568%) compared to 24 of the 27 TAs who returned the questionnaire at the end of the trial (89%). At the mid-point, five TAs were delivering one session per week (23%) and four were delivering four or more sessions per week (18%). By the end of the intervention, none of the TAs who responded to the questionnaire were delivering just one session per week, while three (11%) had run three sessions per week for each pupil and one TA said that they ran either one or three sessions per week. Data provided by Catch Up on the number of sessions completed by each pupil indicates that each pupil received, on average, 32 sessions. An on-treatment analysis is described in the primary analysis section.

The two questionnaires revealed that TAs usually delivered all the sessions one to one (21 of 22 TAs at the mid-point, 96% and 26 of 27 TAs at the end of the intervention, 96%). The majority of TAs stated that they did not give Catch Up pupils literacy homework in addition to that given in their normal literacy classes (16 TAs (73%) at the mid-point survey and 14 TAs (52%) at the end of the intervention). The intervention itself did not contain a homework component but questions were asked to determine if treatment pupils were getting additional homework over and above what was being set as normal. Some TAs said they sometimes did set homework.

When asked if the sessions usually lasted 15 minutes, most interviewees said that they did. However, several noted that during early sessions, when TAs were getting used to delivery, sessions tended to last longer than 15 minutes. This is in line with the responses seen in the TA questionnaires when at the mid-point of the intervention, 10 of the 22 TAs who responded (46%) said that the sessions with pupils usually lasted 15 minutes, while 7 TAs said that their sessions lasted 20 minutes (32%) and 2 said their sessions lasted 30 minutes (9%). By the end of the intervention, 18 of the TAs who responded to the survey said that they spent 15 minutes delivering the session to pupils (67%) while 7 said that they spent 20 minutes with the pupils (26%).

At the mid-point of the intervention, 6 of the 22 TAs (27%) stated that they had adapted the intervention to some extent, while the rest of the TAs had not adapted it at all. At the end of the intervention, over half of the respondents had adapted the intervention; 10 of the 27 TAs (37%) had adapted the intervention to some extent, while 2 TAs had adapted it to a great extent and 3 had adapted it entirely. Twelve had not adapted it at all (44%). However, the interviewees did not appear to have adapted the intervention to any great extent, although a small number had increased the session to 20 minutes to include 5 minutes at the beginning of the session for general introductions and time for the pupil to settle in.

The responses to both questionnaires revealed that TAs have been discussing the intervention with their colleagues. Of those responding to the mid-point questionnaire, 15 of the 22 respondents (68%) said that they had discussed their experiences with primary school colleagues either a little or a lot, while 17 of the 22 respondents (77%) had discussed their experiences with secondary school colleagues either a little or a lot. By the end of the intervention, sharing had increased with 21 of the 27 TAs who responded to the end of intervention survey (78%) stating that they had shared their experiences with other TAs a little while 5 (19%) said that they had shared their experiences a lot.

Outcomes

Staff delivering and coordinating Catch Up Literacy in their schools were overwhelmingly positive about the impact of the programme. They drew upon a range of evaluative methods that they felt demonstrated solid programme impact. These methods included tracking tools provided by Catch Up Literacy, in-school reading tests, pupil feedback, observations, and more general anecdotal evidence. This section reports these outcomes including the results of the follow-up TA survey.

Interviewees had observed the following programme impacts (note that these were self-reported in response to an open-ended interview question about impacts):

- Half of interviewees reported progress in pupils' general reading skills.
- A third specified an increase in pupils' reading age (by as much as 24 months for some pupils).
- Around a third detailed improvements in pupils' spelling skills.
- Around a quarter felt that comprehension and understanding of texts was getting better.
- Survey results show that 19 of the 27 TAs (70%) believed that Catch Up Literacy has improved pupils' attainment in literacy to *some* or *a great extent*.

Added to these outcomes, over half of the staff said that they had seen a rise in the overall confidence of pupils as a result of Catch Up Literacy. Survey results support this finding as 21 of the 27 TAs (78 %) thought that Catch Up Literacy has improved pupils' confidence in literacy either entirely or to a great extent. Similarly, some staff felt that pupils' self-esteem has improved, leading to increased levels of participation in other lessons.

Staff also felt that after the intervention, some pupils were more engaged in reading, enjoyed it, actively chose to read in their spare time, and completed books they started reading in the Catch Up sessions. Supporting this finding, the survey demonstrates that 26 of the 27 TAs (96%) thought that the programme had improved pupils' enjoyment of literacy to *some* or a *great extent*.

Elements of the programme which contribute to its perceived success were identified as:

- A one-to-one teaching approach. This enabled the TAs to build a relationship of trust, adapt the session to the needs of the individual, and work at an appropriate pace. In contrast to the classroom context, TAs felt that the pupils could ask questions and make mistakes without the risk of embarrassment. It also offered opportunities for praise and to listen to the pupil's own individual concerns and opinions which contributed to raising self-esteem and a sense of self-worth. According to staff, this resulted in enjoyment of the sessions and a more positive attitude to attending.
- Short sessions consisting of short activities. One coordinator described this as '*covering the whole aspect of literacy in 15 minutes: reading, spelling, comprehension and writing.*' Added to this, short and focused activities reduced the need for pupils to 'struggle through' a full text or lesson.
- Tailored sessions and resources. Tools provided by Catch Up Literacy enabled schools to attribute reading levels to books and other resources which ensured that texts were tailored to individual learning needs.
- Reading strategies incorporated into the programme. Strategies such as 'de-coding' or identifying difficult words at the start of a chapter were considered effective by staff and they have also observed pupils using them in their lessons.

In line with the programme design, interviewees generally felt that the Catch Up Literacy programme did not suit the 'very weakest' readers but was best suited to pupils who found it difficult to read 'for meaning' or struggled with inference and deduction.

Teaching assistants were also very positive about the impact that Catch Up Literacy had on them as professionals. The ability to monitor and track pupil progress through the programme also enabled TAs to measure the impact of their own work. They, and a number of programme coordinators, described this as fundamental to focusing, tracking, and improving their own performance as professionals. In turn, this is said to give TAs confidence and contribute to their enjoyment of the role.

The survey findings showed that:

- 21 of the 27 TAs (78%) said that Catch Up Literacy has improved their confidence in supporting pupils who struggle with literacy either *entirely* or to a *great extent*,
- 21 of the 27 TAs (78%) felt that Catch Up Literacy has improved their knowledge and skills in delivering literacy support to pupils *entirely* or to a *great extent*.
- 19 of the 27 TAs (70%) said that delivering the Catch Up Literacy intervention has impacted upon their job satisfaction either *entirely* or to a *great extent*.

Teaching assistants explained that they were now more analytical about their approach to teaching, considered new methods, and had also gained a different perspective on how pupils learn. For those new to the profession, the training and programme structure was a useful opportunity to gain a

grounding in literacy teaching and learning methods, while involvement in a formal Catch Up Literacy team was seen to support, reassure, and create a more professional status for the TAs.

In some instances, coordinators explained that Catch Up Literacy had impacted more widely on school life by raising the profile of literacy interventions within delivery schools and led to further investment in future delivery, resources, and staffing. Furthermore, the programme design was reported to be an effective means of supporting relationship building between primary and secondary schools, staff and pupils.

Staff were generally positive about their increased knowledge and engagement with research following involvement in the trial. In particular, one coordinator said that, although their school undertakes a fair amount of research already, staff now appreciated the value and benefits of undertaking an RCT despite their reluctance to carry them out in the past (due to ethical concerns). Other interviewees had appreciated the opportunity it gave them to reflect on their practice or to engage with research, made possible by immersion in a research project. In one school TAs reported that they have now started reading more widely about evidence-based practice while another said that they would continue to use the EEF toolkit to identify effective interventions.

Formative findings

A number of staff said that they would advise other schools to deliver Catch Up Literacy because they felt that it worked and was a '*common sense approach to literacy education*'. Success drivers included: identifying appropriate levels of staffing; adequate space for delivery; and additional time for planning, assessing pupils, and completing programme paperwork. Adequate time for the session itself should be timetabled in, with a realistic idea of how many pupils can be taught in a one-hour slot. Time should also be allocated to recruiting primary schools, relationship building, and sourcing pupil data. This helps to ensure the 'right' pupils are selected for the programme.

Staff believed that their schools would make few changes to the way the programme was implemented in the future, and if anything, might recruit more staff to serve a larger cohort of pupils. However, they did identify the following potential improvements to the Catch Up Literacy intervention itself:

- Provide teaching assistants with direct access to the online resources (rather than having to go through their coordinator). Catch Up protocols are for each TA to have their own log-in details. In practice this did not occur in every case.
- Have more graded books readily available. One interviewee suggested that Catch Up Literacy could build links with a wider selection of publishers in order to achieve this.
- Increase sessions to 20 minutes in order to allow more time for relationship building.
- Provide clearer guidance on pupil 'exit strategies' from the programme.
- Assign a reading 'age' to each book as well as a reading level. Some books have or may contain inappropriate content for the reader.

Conclusion

Limitations

The main limitation of the study is with the level of attrition between randomisation and the post-test in April. Although potentially a high attrition rate of 5.6%, analysis does show that there was no significant difference, on the pre-test measure, between those who dropped out of the study and those who remained within the ITT cohort. Another limitation is the potential introduction of bias when selecting pupils from the reserve list to join either the treatment group or the control. While analysis shows this group to be very small in number (only three of those included in the ITT analysis came from this list), there is potential for a biased selection of pupils. The main analysis was rerun excluding these three pupils and there is no reportable difference in model coefficients. Other than this relatively small limitation, the collection of eligible pupils and the randomisation process has resulted in a well-structured trial.

The training and support received by teaching assistants resulted in a high degree of confidence in the delivery of the intervention. While both the interviews and questionnaires identified that teaching assistants were more confident by the end of the trial and had adapted the intervention to meet local needs, this would appear to be well within acceptable levels to consider the intervention has been delivered as the protocol and guidelines required.

One other potential area for consideration as a limitation is with the intervention itself. As an intervention it is not a transition intervention, i.e. it is not specifically designed to address issues around a dip in performance over the period of transition between primary and secondary school. It is a programme that is designed to take place over a number of weeks with pupils receiving a number of one-to-one sessions. A period of time where a pupil does not receive the intervention is not part of the intervention's normal delivery. Analysis of data at the start of Year 7 would suggest that any negative effects of the transition between primary and secondary impacted equally on treatment and control group pupils. To assess this, NGRT tests were administered at the start of Year 7 and a non-significant effect of 0.02 was identified between pupils in the intervention and control groups.

Testing was organised and managed by the delivery organisation with TAs being provided with clear and detailed guidelines on test administration. While there was no independent monitoring of this process (although the evaluator did see the guidance document) there is no evidence to suggest that the administration of the tests, or their marking, were not undertaken following accepted protocols. Test administration and marking for both the pre and post-tests were, so the external evaluator was informed, carried out blind to group membership, with group membership being added to results after the marking had been undertaken. There is no evidence to suggest that this was not the case.

Interpretation

The primary analysis for this evaluation was to determine the impact of the Catch Up Literacy evaluation to increase literacy scores. The primary analysis identifies, and based on this trial, that there is insufficient evidence to reject the null hypothesis of there being no difference between the treatment and control groups, although the effect size is small. The prior attainment of pupils was controlled for in the models by the pupils' reading score at Key Stage 2. Additional models were run looking at effects for pupils eligible for free schools meals, pupil gender, and age. The overall interpretation of these models is that there is insufficient evidence to claim that the Catch Up Literacy intervention is having an effect over and above normal classroom activities. One-to-one teaching has been shown to have a number benefits for increasing pupil abilities in literacy and numeracy. The recent trial looking at Catch Up Numeracy (Rutt *et al.*, 2014) identified a significant effect of one-to-one teaching conducted by TAs and the EEF toolkit identifies a number of trials that have shown the significant effects of this type of delivery. This trial, while not identifying any gains in literacy scores,

has identified a couple of significant gains in pupils' attitude to school and in their reading confidence. These are very relevant findings and, while considered as part of the secondary analyses, should be seen as being highly beneficial, and necessary, when wishing to improve pupil levels of literacy. Attitudes and confidence may need to be improved first before any improvements in test scores can be observed.

It is evident from the process evaluation, and the questionnaires, that TAs and Catch Up coordinators valued the intervention and believed it had a positive impact on some pupils. These impacts were felt to be on literacy outcomes as well as around softer outcomes such as confidence, engagement with learning, and attitude to school, although more improvements were identified for the softer outcomes. As for TAs, outcomes from the telephone interviews and the questionnaires clearly identified the benefits they felt the Catch Up Literacy intervention had had on their own satisfaction and on their personal and professional development. More engaged staff can only be a good thing for a school and its pupils.

It was also clear from the process evaluation that delivering a structured intervention within a school can be problematic due to pupil absences, TAs' timetables, and conflicting demands on TAs' time. An intervention such as Catch Up needs to be planned into the timetable from the outset so that resources can be allocated, particularly to identify an enclosed and private space due to the need for reading out loud.

Appendix A

Evaluation of Catch Up® Literacy – Student Questionnaire

We are doing some research on Catch Up® Literacy. We would like you to answer some questions so we can find out what you think about reading and writing, school and yourself. The questions will take you about 15 minutes to answer.

All your answers to these questions will be kept private and we will not use your name in any of our reports. Please use **BLACK INK** to complete this questionnaire.

About you

First Name:			
Last Name:			
Date of Birth:			

1. How much do you agree with the following statements: (Please tick one box on each row)

	Strongly agree 1	Agree 2	Not sure 3	Disagree 4	Strongly disagree 5	Did not do this 6
I enjoy reading	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
I feel confident reading out loud to the class	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
I know how to deal with words I find hard to read	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
I enjoy reading in my own time	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Reading is one of my favourite things to do	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
I enjoy talking to my friends/ family about the books I have read	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
I enjoy writing	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
I find writing easy	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
I feel confident about writing in sentences	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Writing is one of my favourite things to do	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
I am doing well in reading	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
I am doing well in writing	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
I liked working with the same Teaching Assistant during Year 6 & Year 7 for Catch Up® Literacy	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

2. How much do you agree with the following statements:

(Please tick one box on each row)

	Strongly agree 1	Agree 2	Not sure 3	Disagree 4	Strongly disagree 5
It is important to do well at school	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
I try hard at school	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Most of the time I feel confident about doing my work in lessons	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Most of the time I enjoy school	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
I behave well in lessons	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
I always do my homework	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

3. How much do you agree with the following statements:

(Please tick one box on each row)

	Strongly agree 1	Agree 2	Not sure 3	Disagree 4	Strongly disagree 5
I feel happy	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
I am a confident person	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
I have people to talk to if I feel unhappy or worried	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
I like the way I am	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
I worry when I have to meet new people	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
I feel positive most of the time	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Thank you very much for answering our questions. Please put this questionnaire into the envelope and hand it to your teacher.

Appendix B

Evaluation of Catch Up® Literacy – Teaching Assistant Survey

As you are aware, the National Foundation for Educational Research (NFER) is currently undertaking an evaluation of **Catch Up Literacy**. As a Teaching Assistant (TA) participating in the project, we would appreciate it if you could complete this short survey.

Our research has been commissioned by the Education Endowment Foundation (EEF), an independent charity dedicated to raising the attainment of disadvantaged pupils by challenging educational disadvantage, sharing evidence and finding out what works.

The purpose of this survey is to explore your views and experiences of delivering Catch Up Literacy to year 6 pupils (i.e. the questions do not relate to any other literacy support you provide to other pupils not part of this project). This survey should take no more than **ten minutes** to complete. We would be grateful if you could complete the questionnaire in **BLACK INK** by **19th July 2013** and return it directly to NFER in the pre-paid envelope provided.

Please be assured that your answers will be treated in confidence by the NFER research team. Survey data will only be shared with EEF in anonymised form. It will be reported in aggregated form together with everyone else's responses so individual responses will not be shared with Catch Up, nor the primary or secondary schools within which you will work as part of this project.

If you have any queries please do not hesitate to contact Helen Francis on 01753 637 344 or email h.francis@nfer.ac.uk

Thank you in advance for your help with this survey.

Your Catch Up Literacy sessions

1. Typically, how many Catch Up Literacy sessions have you held with each project pupil per week (including your assessment sessions)? (Please tick one box)

None ☐ 1 One ☐ 2 Two ☐ 3 Three ☐ 4 Four or more ☐ 5

2. Roughly, how long do you spend per session:
(Please enter whole numbers only or tick not sure)

Preparing resources/reading materials
for the assessments? Minutes Not sure ☐

Preparing resources/reading materials
for the intervention? Minutes Not sure ☐

With your pupil in the sessions? Minutes Not sure ☐

3. For each person listed below, please indicate the extent to which they set the work for your Catch Up Literacy sessions:
(Please tick one box on each row)

	Not at all 1	Rarely 2	Sometimes 3	Usually 4	Don't know 5
Yourself	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Year 6 class literacy teacher	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Primary school literacy co-ordinator	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Secondary school literacy co-ordinator	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Your in school Catch Up Literacy co-ordinator	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Your Catch Up Literacy trainer	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Someone else (please specify below):	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

4. Please answer the following questions thinking about your Catch Up Literacy sessions: (Please tick one box on each row)

To what extent are your...	Not at all 1	Rarely 2	Sometimes 3	Usually 4	Don't know 5
Catch Up Literacy sessions delivered one-to-one?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
sessions taking place at the same time as the pupils' normal literacy lessons?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Catch Up Literacy project pupils given any literacy homework (including Catch Up digital games) in addition to what is issued in their normal literacy classes?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

5. To what extent have you shared your experiences of Catch Up Literacy with other TAs (not involved in Catch Up Literacy):
(Please tick one box on each row only)

	Not at all 1	A little 2	A lot 3	Not sure 4
At the primary school	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
At the secondary school	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Catch Up Literacy intervention

6. The following questions ask you about the Catch Up Literacy intervention (excluding the assessment). (Please tick one box on each row)

	Not at all 1	To some extent 2	To a great extent 3	Entirely 4	Don't know 5
To what extent do you feel Catch Up Literacy differs from normal primary school literacy practice?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
To what extent do you feel Catch Up Literacy differs from normal secondary school literacy practice?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
How well equipped do you currently feel to deliver Catch Up Literacy?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
To what extent have you adapted the Catch Up Literacy intervention?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

7. Have you ever received Catch Up Numeracy training? (Please tick one box only)

Yes	No	Not sure
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Background information

8. Please indicate whether you are male or female? (Please tick one box only)

 Slough, SL1 2DQ**

Appendix D

Consent Letter

[Primary school headed paper]

Dear Parent/Carer

THE CATCH UP LITERACY – Year 6 and Year 7 research project

..... (name of school) has been selected by Catch Up[®], a not-for-profit, registered charity, to take part in a research project to look at the benefits of Catch Up Literacy for Year 6 and Year 7 pupils. The project will start in April 2013 and will involve only 17 secondary schools across England, with some Year 6 pupils in some of these secondary schools' linked/feeder primary schools. The project will continue up to April 2014.

During this period some pupils will be randomly selected by the project to receive Catch Up Literacy sessions. This will start in Year 6 and continue in Year 7. The random selecting will be undertaken by the National Foundation for Educational Research (NFER) (an educational research organisation) and will take place after the project starts in April 2013. All the pupils will take part in testing in Year 7.

All the data will be used in an anonymised way and your child or the school will not be identified in any reports about the research. Your daughter/son cannot take part in the project without your permission and we would like to ask that you complete and return all this form to give permission for your child to take part in this exciting project.

You can choose to withdraw your child from the project at a later point and if you would like any further information please let me know.

Yours sincerely

Name of school contact

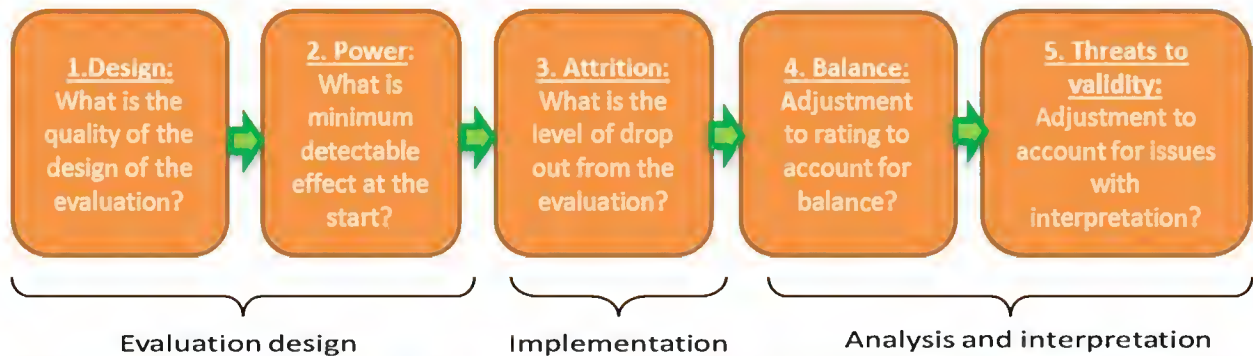

I (name of parent or guardian) give permission for

..... (name of child) from

(name of school) to take part in the Catch Up Literacy Year 6 and Year 7 project.

Signed Date

Appendix C: Padlock rating

Rating	1. Design	2. Power (MDES)	3. Attrition	4. Balance	5. Threats to validity
5	Fair and clear experimental design (RCT)	< 0.2	< 10%	Well-balanced on observables	No threats to validity
4	Fair and clear experimental design (RCT, RDD)	< 0.3	< 20%		
3	Well-matched comparison (quasi-experiment)	< 0.4	< 30%		
2	Matched comparison (quasi-experiment)	< 0.5	< 40%		
1	Comparison group with poor or no matching	< 0.6	< 50%	↓	↓
0	No comparator	> 0.6	> 50%	Imbalanced on observables	Significant threats

The final security rating for this trial is 4 . This means that the conclusions have moderate to high security.

The trial was designed as an efficacy trial and could achieve a maximum of 5 . This was a well-designed effectiveness trial. The MDES was above 0.2, and below 0.3, reducing the padlocks to 4. The level of attrition was relatively low (8%), so the padlocks remained at 4. There was evidence of an imbalance at baseline in prior attainment of 0.11, which would have resulted in a loss of 2 padlocks had there not been evidence that this was due to chance and not to attrition. Instead, only 1 was lost. Finally, since the intervention was delivered by TAs, the fact that the attainment measures were delivered by TAs is a threat to the validity. Therefore, the final padlock rating is 4.

Appendix D: Cost rating

Cost ratings are based on the approximate cost per pupil of implementing the intervention over one year. Cost ratings are awarded using the following criteria.

Cost	Description
£	<i>Very low:</i> less than £80 per pupil per year.
£ £	<i>Low:</i> up to about £170 per pupil per year.
£ £ £	<i>Moderate:</i> up to about £700 per pupil per year.
£ £ £ £	<i>High:</i> up to £1,200 per pupil per year.
£ £ £ £ £	<i>Very high:</i> over £1,200 per pupil per year.
